## BEFORE AND AFTER PEELS

This woman was very frightened of peeling. We did the lightest ACM #1 peel for 5 mins and she started using the Original Range. You can see the in-elastic crepe skin on the upper eyelid. After a while we were able to use the ACM for about 10 minutes. She had one peel a month for 6 months.

After 6 months it seems almost as though she had an upper blepharoplasty because the skin is more elastic and retracts normally. Notice that the fine wrinkles at the medial side of the upper eyelid have improved. Surgery cannot correct that problem.

A BEAUTIFUL SKIN FOR A LIFETIME
