non - surgical hand rejuvenation

What is hand rejuvenation? Over time, hands can begin to become pigmented, lose fat, and become wrinkled. Hand rejuvenation can help to reverse these problems with a combination of IPL and Dermal Fillers.

How can I prevent my hands from ageing? There is no real method of preventing hands from ageing other than the use of a good sunscreen. It is important to place sunscreen on the back of the hands as well as the face and neck.

As the hands age there is a loss of subcutaneous tissue in the dorsum of the hands. The hands become skeletonized with more prominent appearance of tendons and veins.

This can be a “giveaway” to the patient’s true age despite efforts to rejuvenate the face.
