## FACIAL REJUVENATION WITH YOUR OWN CELLS

### PLATELET-RICH PLASMA (PRP)

### THE NEW TREATMENT IN BIOLOGICAL DERMAL REJUVENATION

#### THE PROCESS IS -

- SAFE and Physiologically Active
- Preparation is *Simple and Quick*, and completed on the Physicians premises in the appointment time.
- Can be used in multiple areas for dermal rejuvenation

#### WHICH FACIAL AND BODY AREAS CAN BE TREATED?

Crinkling skin around the eyes

Cheeks and Mid Face

Neck

Jaw Line

Chest and Décolletage

Back of hands and arms

Body Areas

Knees

Elbows

#### WHAT IS THE PROCESS OF FACIAL REJUVENATION with PRP?

- Your clinician will assess the degree of skin aging, perform a skin analysis, and recommend a sensible treatment with reasonable outcome.
- Options of facial rejuvenation are explained to you, including efficacy and safety. Cost analysis is discussed and the number of sessions possibly required.
- Almost all skin tones show that the process is safe and effective because your own enriched plasma is used, but not all grades of wrinkling can be improved.
- A photograph of the skin is taken to assist the follow-up and grading of the improvement.
- Prior to treatment a blood sample of 10 – 20 mls is extracted from the patient. This blood is immediately placed in the centrifuge for 8 minutes. When centrifugation is complete your plasma will be separated from your red blood cells. The rich platelets are extracted and injected into the skin. By an injection technique, the PRP is injected into the skin under topical local anaesthesia.
- PRP facial rejuvenation can be a one off treatment, but further microinjections can be re-performed at 4 weekly intervals for lines and wrinkles if the client desires this.
- This entire process and injection time is simple and takes approximately 45 minutes – 1 hour in total. The process is on the same day and on the same medical practice.

## SIDE EFFECTS OF REGEN - PRP FACIAL REJUVENATION

- Minimal: Expect minimal swelling, bruising and redness for 12-24 hours.
- A bruise at the venapuncture site may be visible for 2-3 days.

## EXPECTATIONS FOR REGEN - PRP

- Results are visible at 3 weeks and improve gradually over ensuing months with improvement in texture and tone.
- Cosmeceuticals, Skin Peels and Light therapies can enhance the results.
- Advanced wrinkling cannot be reversed and a minimal improvement is predictable in persons with drug, alcohol and tobacco usage.
- Severe scarring may not respond.

## ARE RESULTS IMMEDIATE?

No. Swelling from the fluid is what you will see and feel first. Once the swelling has subsided you will not see much change at all. Over a few weeks the Platelets will stimulate the growth factors which will assist in more collagen growth.

## HOW MANY TREATMENTS ARE REQUIRED?

This will depend upon the health and age of your skin. Normally it is advised to have 2 – 3 treatments 4 weeks apart. However your clinician will determine your treatment protocol according to your skin condition.

## HOW LONG DO RESULTS LAST FOR?

Treatment results vary however in most patients the results last up to 18months. Touch up treatments will maintain the results as well.
